

## Ennshafen Port (EH00) ERDF PP1

Ennshafen OÖ GmbH unites the inter-state Ennshafen at the border of Lower and Upper Austria. It is a neutral public harbour with private cargo companies operated via PPP model (public private partnership model). Since the beginning of the operative harbour business in the year 1993, annual water cargo handling rose from 30,000 to actually about 700,000 tons, while overall handling of street, railway and waterway cargo reached over 5 million tons. Thanks to the modern trimodal - waterway/railway/street - infrastructure and qualified staff, Ennshafen is an international top industrial location for approx. 60 companies and more than 2,200 people. Expansion of the container terminal (from 44,000 TEU in 2004 to 300,000 TEU in 2016) is a living testimony for the success of inland water transport while the existing information and event area in Ennshafen Logistic Centre is supporting intensive IWT lobbying activities.

Ennshafen OÖ GmbH's extensive experience and insight into industry requirements and expectations shall prove invaluable in the project promotion and dissemination activities, helping all Austrian partners and not only adjust project communications addressed to shipping companies and various stakeholders in the industry to the real needs of the market. The IT pilotage action which is planned in WP5 should give additional value in the project concerning future port communication systems advantages in the field of IWT.

In DAPhNE project EH00 is responsible for the coordination of WP5 Port Development – focus on Port Infrastructure & Industrial Development, Public-private partnerships for port investments, Port IT Community System (PCS) and Innovation / new market opportunities.
