

iC consulenten ZT GesmbH (iC) ERDF PP2

iC consulenten (iC) is a leading Austrian engineering consultant with a strong focus on Central and Eastern Europe.

iC has implemented consulting services in almost 100 countries, including all Partner states. The experts of iC operate from the headquarters in Vienna and from branches, site offices and subsidiaries around the world. Within the last decades iC could gather broad experience in the elaboration of studies, projects, programs, strategies and plans related to (among other transport fields) IWT and ports.

The integrative, innovative and international approach of iC in transport and mobility is secured by engineering competence, new technologies and clear understanding of mobility requirements for an efficient transport infrastructure and reliable services.

The international approach and presence of iC in Partner states, particularly within the sector of IWT and ports on the Danube and its navigable tributaries, guarantees excellent knowledge of port management and operation strategies and practices, administrative barriers and responsibilities. Within several Danube studies working relations were developed with port authorities from which benefits can be drawn for the project.

All of the above-mentioned aspects make iC as a valuable partner, not only for port-related know-how, but also for the analysis of existing port technologies, practices and administrative processes and solution proposing.

In the DAPhNE project iC supports port infrastructure development, Port Master Planning and the preparation of guidelines for industrial development initiatives. iC plays a key role in the preparation of the Danube Port Development Strategy & Action Plan. iC further assists in the identification of public-private partnership models for port investments, port business strategies, human resources development and the harmonization of port administration processes.
