

## RGO Communications Ltd. (RGO) ERDF PP11

Founded in 2008, RGO Communications Ltd. provides services of information and communication technology (ICT) development with multidisciplinary applications, project management and consultancy. RGO is a provider of ICT systems for transport tracking and tracing in different transport modes, with particular emphasis on inland waterway transport. Core business is development of River Information Services (RIS), which is a generic term used for the services based on the state-of-the-art information and communication technology which is used for traffic/transport management on inland waterways, allowing interfaces towards other transport modes (rail, short-sea-shipping, road) and logistic tools, such as port management systems. Our experts have been involved in inland waterway related ICT implementation in Croatia (Danube and Sava waterways), Bulgaria (Danube), Slovakia (Danube), Serbia (Danube), France (the Seine), the Czech Republic (Vltava), several countries in Africa etc. Our in-house experts have extensive experience in design, development and maintenance of different Intelligent Intermodal Transport Systems and Port/Terminal/lock Management Systems.

Within the framework of the DAPhNE project RGO will be in charge of activity Port IT Community System PCS, whose main goal is to develop modular port community system which will simplify the work flow within the ports.
