

Improved transport & logistics management processes (RSOE)

Kick-Off Meeting

Csaba Kovács

Project co-funded by European Union Funds (ERDF, IPA)

Objective & Approach

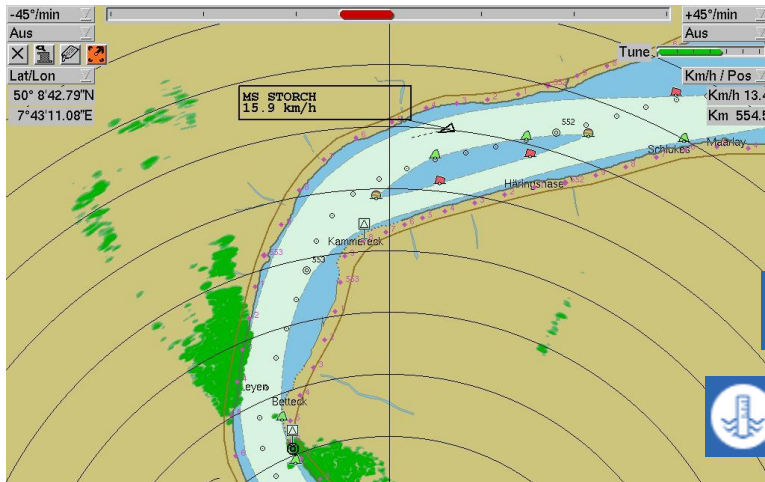

Main objective is to improve transport & logistics management processes of fleet operators making use of digitalization and considering available tools and services, incl. RIS, as well as future requirements derived from modern global logistics

- Analysis of existing logistics & transport management processes and requirements of a representative sample of Danube fleet operators and best practices from Europe
- Analysis of available services (public & private), digital data & tools & requirements out of regulatory framework
- Guidelines for improved transport & logistics management processes of fleet operators: model concept for improved processes of IWT fleet operators with recommendations on use & integration of tools, digital data & services
- Know-how transfer events concerning logistics & transport management processes

Areas of work

- Identification of previous project experiences
- Cooperation with related projects and developments
- Analysis of available and planned national and transnational RIS services
- Analysis of innovative hardware and software tools for fleet operators
