

DBS Gateway Region

Regional and Transport Development in the
Danube-Black Sea Region towards a
Transnational Multiport Gateway Region

Main challenge

Main challenge

potential to become a very important gateway for sustainable and environmentally-friendly waterway freight transport between Central Europe, the Caspian region and the Far East

current level of infrastructure development and logistics performance is not sufficient to take over the envisaged global role and rising transport demands

- growing cargo flows on these routes will only result with raising of road transport figures
- which will restrain economic development again and
- have negative effects on the regions

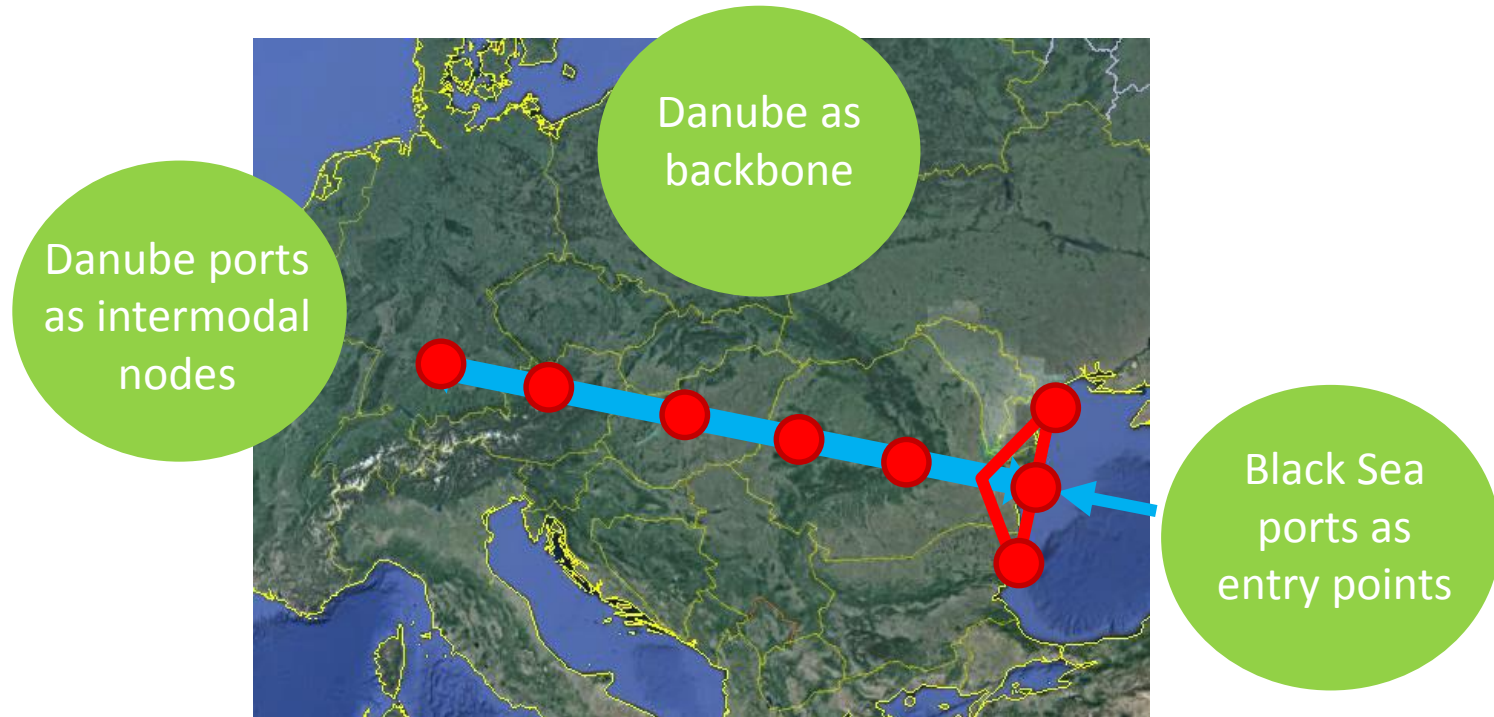

DBS Gateway Region

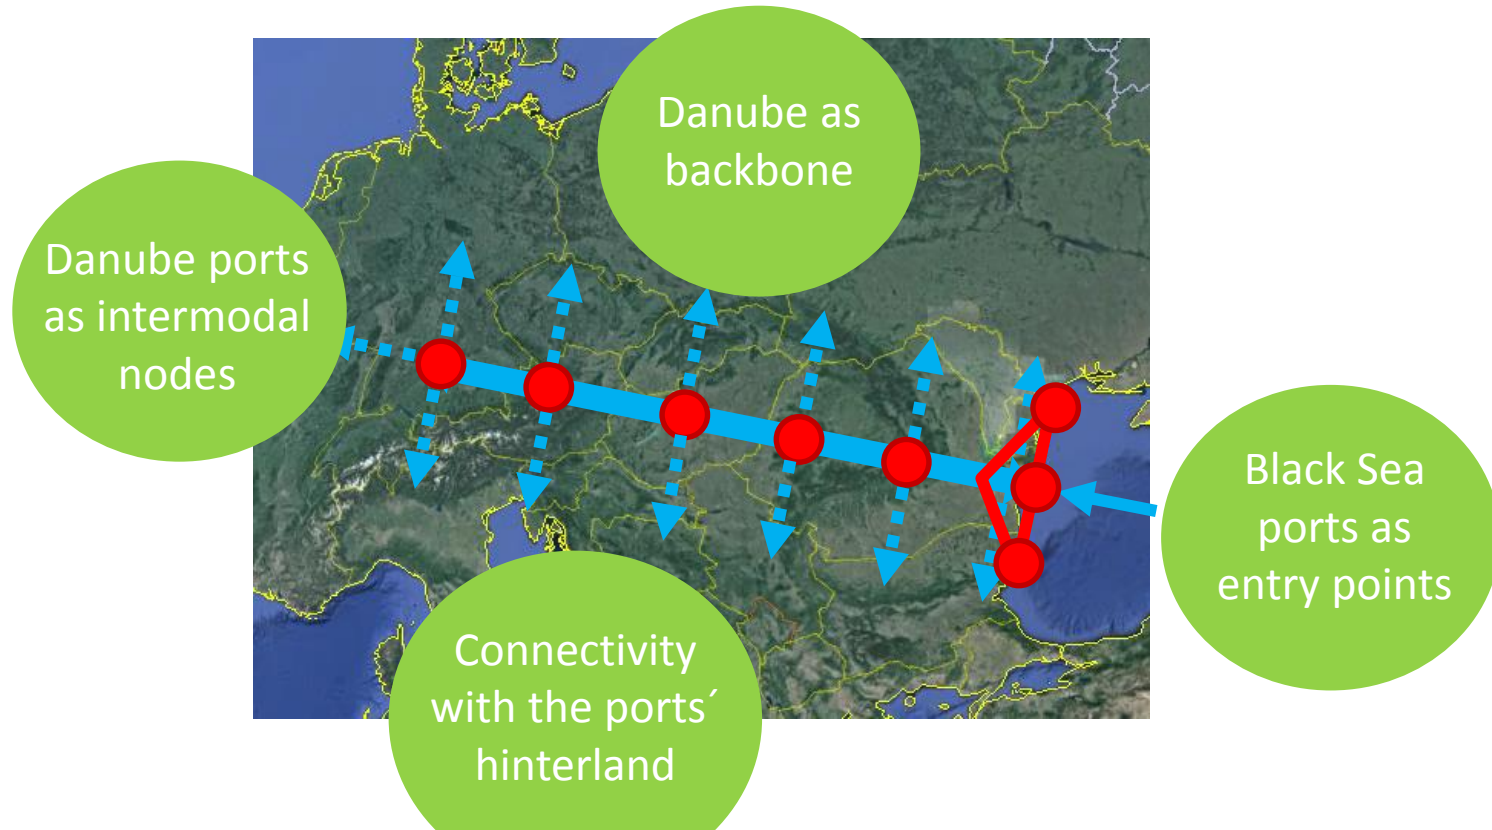

preparation and promotion
of the **Danube-Black Sea region as the gateway for sustainable and environmentally-friendly freight transport** between Central Europe and the Black Sea, the Caspian region and the Far East

Black Sea
ports as
entry points

What do we need to get there?

- Exchange of information, ideas, capacity building etc.
- Joint voice for joint interests
- Better inter-connectivity throughout the whole transport chain (inter-modality to the last mile)

How are we going to achieve this?

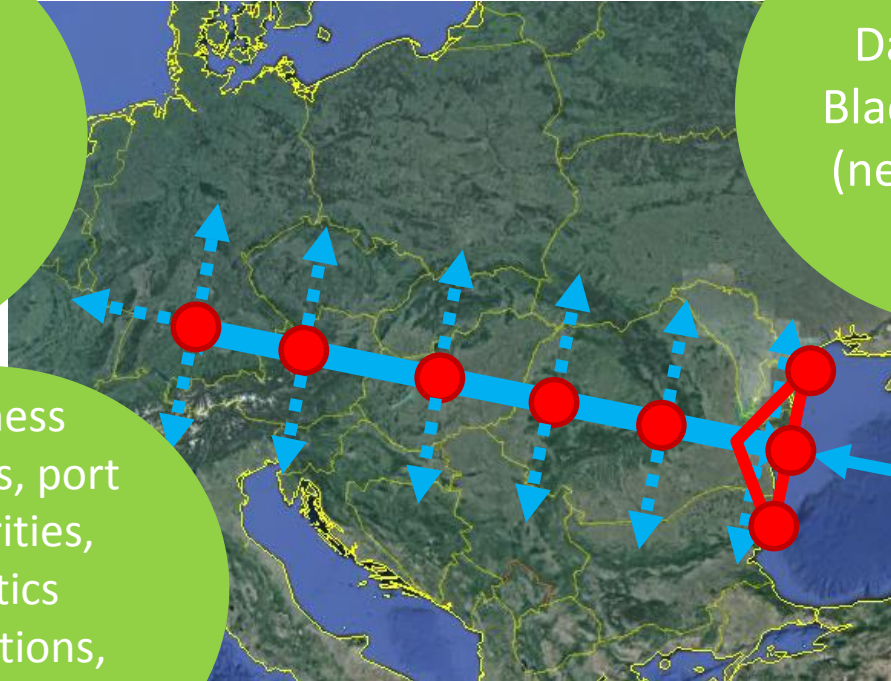

Cooperation of all relevant stakeholders

ports and
cities/regions
(hinterland
connection)

Danube and
Black Sea ports
(new services)

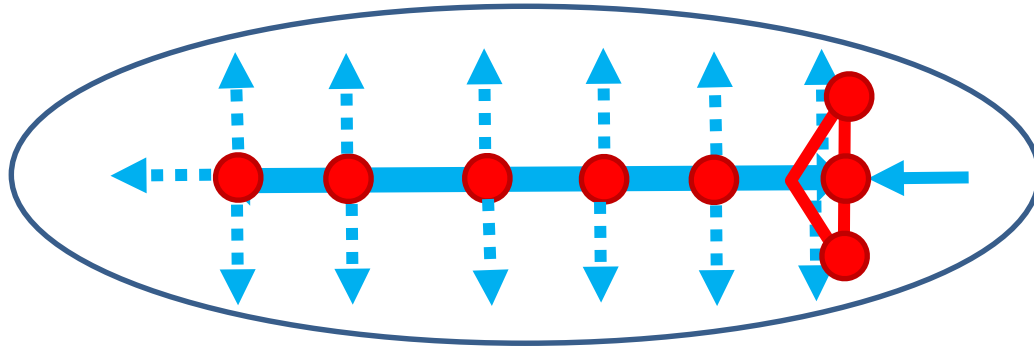

business
agencies, port
authorities,
logistics
associations,
universities
...

cities/regions
and ministries
(strategies and
policies)
