RADAR: Making Road Safety Women's Business

Road safety has been a field that was mainly led by men, I believe because of the engineering studies needed. But road safety is everyone's business, regardless of their gender and variety gives a wider perspective on topics.

Nikolett Winkler
Project Communications Coordinator
KTI Institute for Transport Sciences

www.interreg-danube.eu/RADAR

Project co-funded by European Union funds (ERDF, IPA, ENI).

Why did you choose to work in road safety sector?

Road safety has entered my life randomly. I graduated as an economist and came around this job offer where they looked for a project coordinator. That was KTI, and I am working at the Road Safety Research Centre ever since. This field has opened up a whole new world for me and I am glad to still be a part of it.

In your opinion, why is it important that more women take up road safety challenges in the near future?

Road safety has been a field that was mainly led by men, I believe because of the engineering studies needed. But road safety is everyone's business, regardless of their gender and variety gives a wider perspective on topics.

What is your impact as a woman in projects such as RADAR?

I never feel differentiated as a woman, even if sometimes we are outnumbered by men in these projects. Everyone brings their own qualities and I feel a good dynamic working together with different people within and beyond border.

Can you describe in maximum five words about what RADAR is doing or has done for you?

I have learned to be open to always learn something new.
