

DARINGe – Danube Region Leading Geothermal Energy

www.interreg-danube.eu/darlinge

D.3.2.1 Stakeholder database

April 2017

D.3.2.1 Stakeholder database

Authors: Bojan Vogrinčič (LEAP), Štefan Žohar (LEAP) and Jasmina Perkič (LEAP) with contributions from: MFGI, MFAT, InnoGeo, GeoZS, HGI-CGS, ZARA, IGR, Terratechnik, FZZG, GSRS, FMG, MSK, PSEMR

DARLINGe project is co-funded by the European Regional Development Fund (1612249,99 €) and by the Instrument for Pre-Accession Assistance II (534646,6 €) under Grant Agreement no DTP1-099-3.2

2.2 Project area by country	3

1. DARLINGe – Introduction

The aim of DARLINGe project (Danube Region Leading Geothermal Energy), carried out by 15 partners from 6 countries in Central, South-East and Eastern Europe is to contribute to energy security and energy efficiency by enhancing the efficient use of deep untapped geothermal resources in the heating sector, and by introducing the “cascade use” of geothermal energy.

Establishing a strong and alive contact with stakeholders representing the entire value chain of the geothermal sector in all participating countries is one of the main goals of DARLINGe. Consultations with stakeholders, their involvement into project activities, consideration of their needs and tailoring project activities according to their expectations will ensure that final project outputs will reach their maximum impact. Furthermore the training of stakeholders on tools on sustainable reservoir management developed by the project is also among the main aims of DARLINGe.

The first step was to identify stakeholders in all partner countries, which was done at the very beginning of the project and which results are summarized in this report results (D 3.2.1 Stakeholder database) within WP 3 Capacity building / Activity 3.2 Stakeholder consultations.

2. Stakeholder database

In Stakeholder database partners have identified the relevant stakeholders in all six partner countries according to the following target groups:

- ministries having roles and competences associated to geothermal energy at national levels
- public authorities involved in the licensing and management of deep geothermal energy resources including mining concessions, water management, environmental aspects, land-use planning, etc.
- governmental and sectoral agencies at national and regional levels (e.g. developing agencies, energy secretariats, etc.)
- service providers for the geothermal sector (e.g. drilling companies, surface installation providers – pipelines, heat pumps, etc.)
- project developers, consulting companies
- project operators: current thermal water users (e.g. spas, agriculture companies), heat suppliers (e.g. ESCO-s)
- municipalities
- network institutions (geothermal associations, clusters)
- financing institutions (e.g. banks providing loans for geothermal projects)
- academia (research institutes, universities)
- civil society

Partners from each project countries have prepared their own Stakeholder database (in the form of a uniform excel table) with the following main data:

- original name of the organisation
- English name of the organisation

- address
- organisation email, website
- contact person's name and contact details (phone, email)
- profile and characteristics of the organisations operations (main tasks, responsibilities)

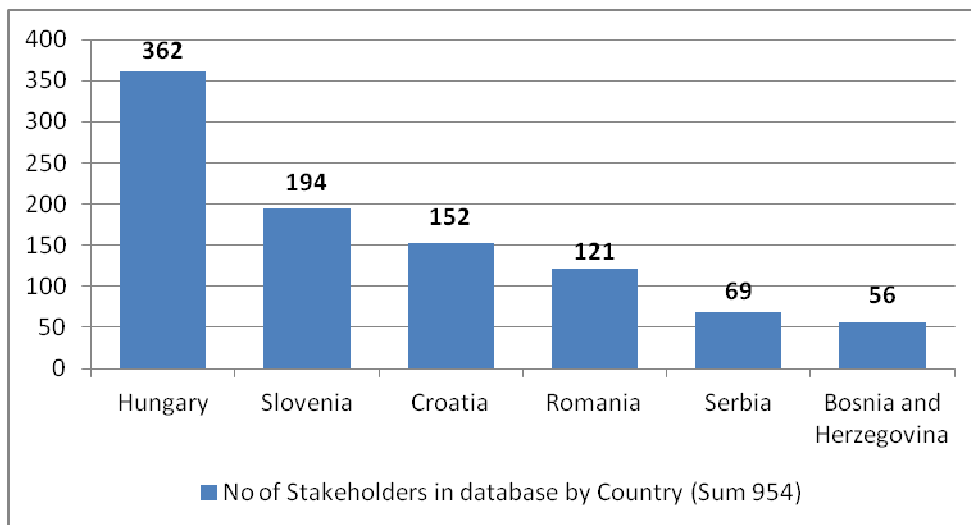

Based on the national databases LEAP (WP3 leader) has compiled Stakeholder database as a deliverable (D 3.2.1 Stakeholder database).

This database is considered to be an alive document throughout the project lifetime: data might be corrected (e.g. new contact details), new stakeholders can be identified and added during later project activities. An updated version of this database will be delivered at the end of the project.

2.1 Results

The *Stakeholder database* contains contact details of 954 stakeholders representing the entire geothermal value chain (ministries, authorities, project developers and operators, present users, SME-s, academia, etc.) from 6 countries (Table 1).

Table 1: Number of stakeholdes in database by Country

In this document we present *Stakeholder database* only with selected data (contact person, name of the organisation, country, e-mail), however more detailed information, including profile and characteristics of the organisations operations (main tasks, responsibilities, activities, competencies, influences, etc. of all identified stakeholders) is available at this link:

<http://www.lea-pomurje.si/datoteke/dsh.xlsm>

Database with contacts of media (printed media, radio and TV media, web portal, press agency) is available at this link:

<http://www.lea-pomurje.si/datoteke/dm.xlsm>

2.2 Stakeholder distribution per country area

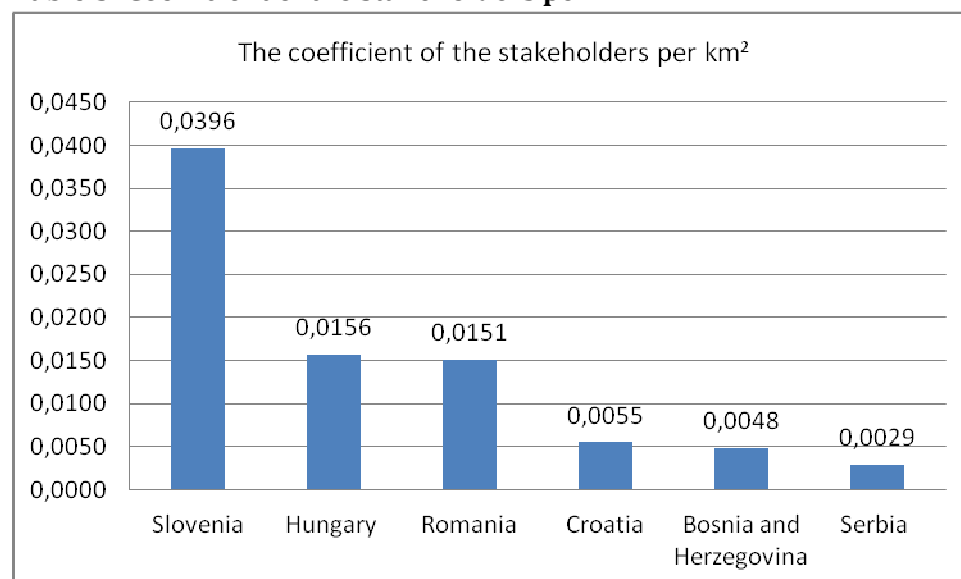

Table 2 shows the size of the DARLINGe project area by country. With the coefficient of the stakeholders per km² we got the information how many stakeholder/s cover one square kilometer of DARLINGe project area by country.

Table 2: Project area by country, number of stakeholders in database by country, coefficient of stakeholders per km²

Country	The size of the DARLINGe project area by country (per km ²)	No of Stakeholders in database by Country	The coefficient of the stakeholders per km ²
Slovenia	4900	194	0,0396
Hungary	23152	362	0,0156
Romania	8026	121	0,0151
Croatia	27687	152	0,0055
Bosnia and Herzegovina	11590	56	0,0048
Serbia	24017	69	0,0029
DARLINGe area	99372	954	

Table 3 shows that in Slovenia the coefficient of the stakeholders per km² is the highest (0,0396) so here the coverage with stakeholder over the area is the largest, in the second place is Hungary with coefficient 0,0156, then is Romania with 0,0151, Croatia (0,0055), Bosnia and Herzegovina (0,0048) and Serbia with coefficient 0,0029. Of course these numbers reflect the uneven territory of the participating countries, as well as the success rate of first identifications of stakeholders, however provide a first impression about the representation of the geothermal sector in the given country.

Table 3: Coefficient of the stakeholders per km²
