

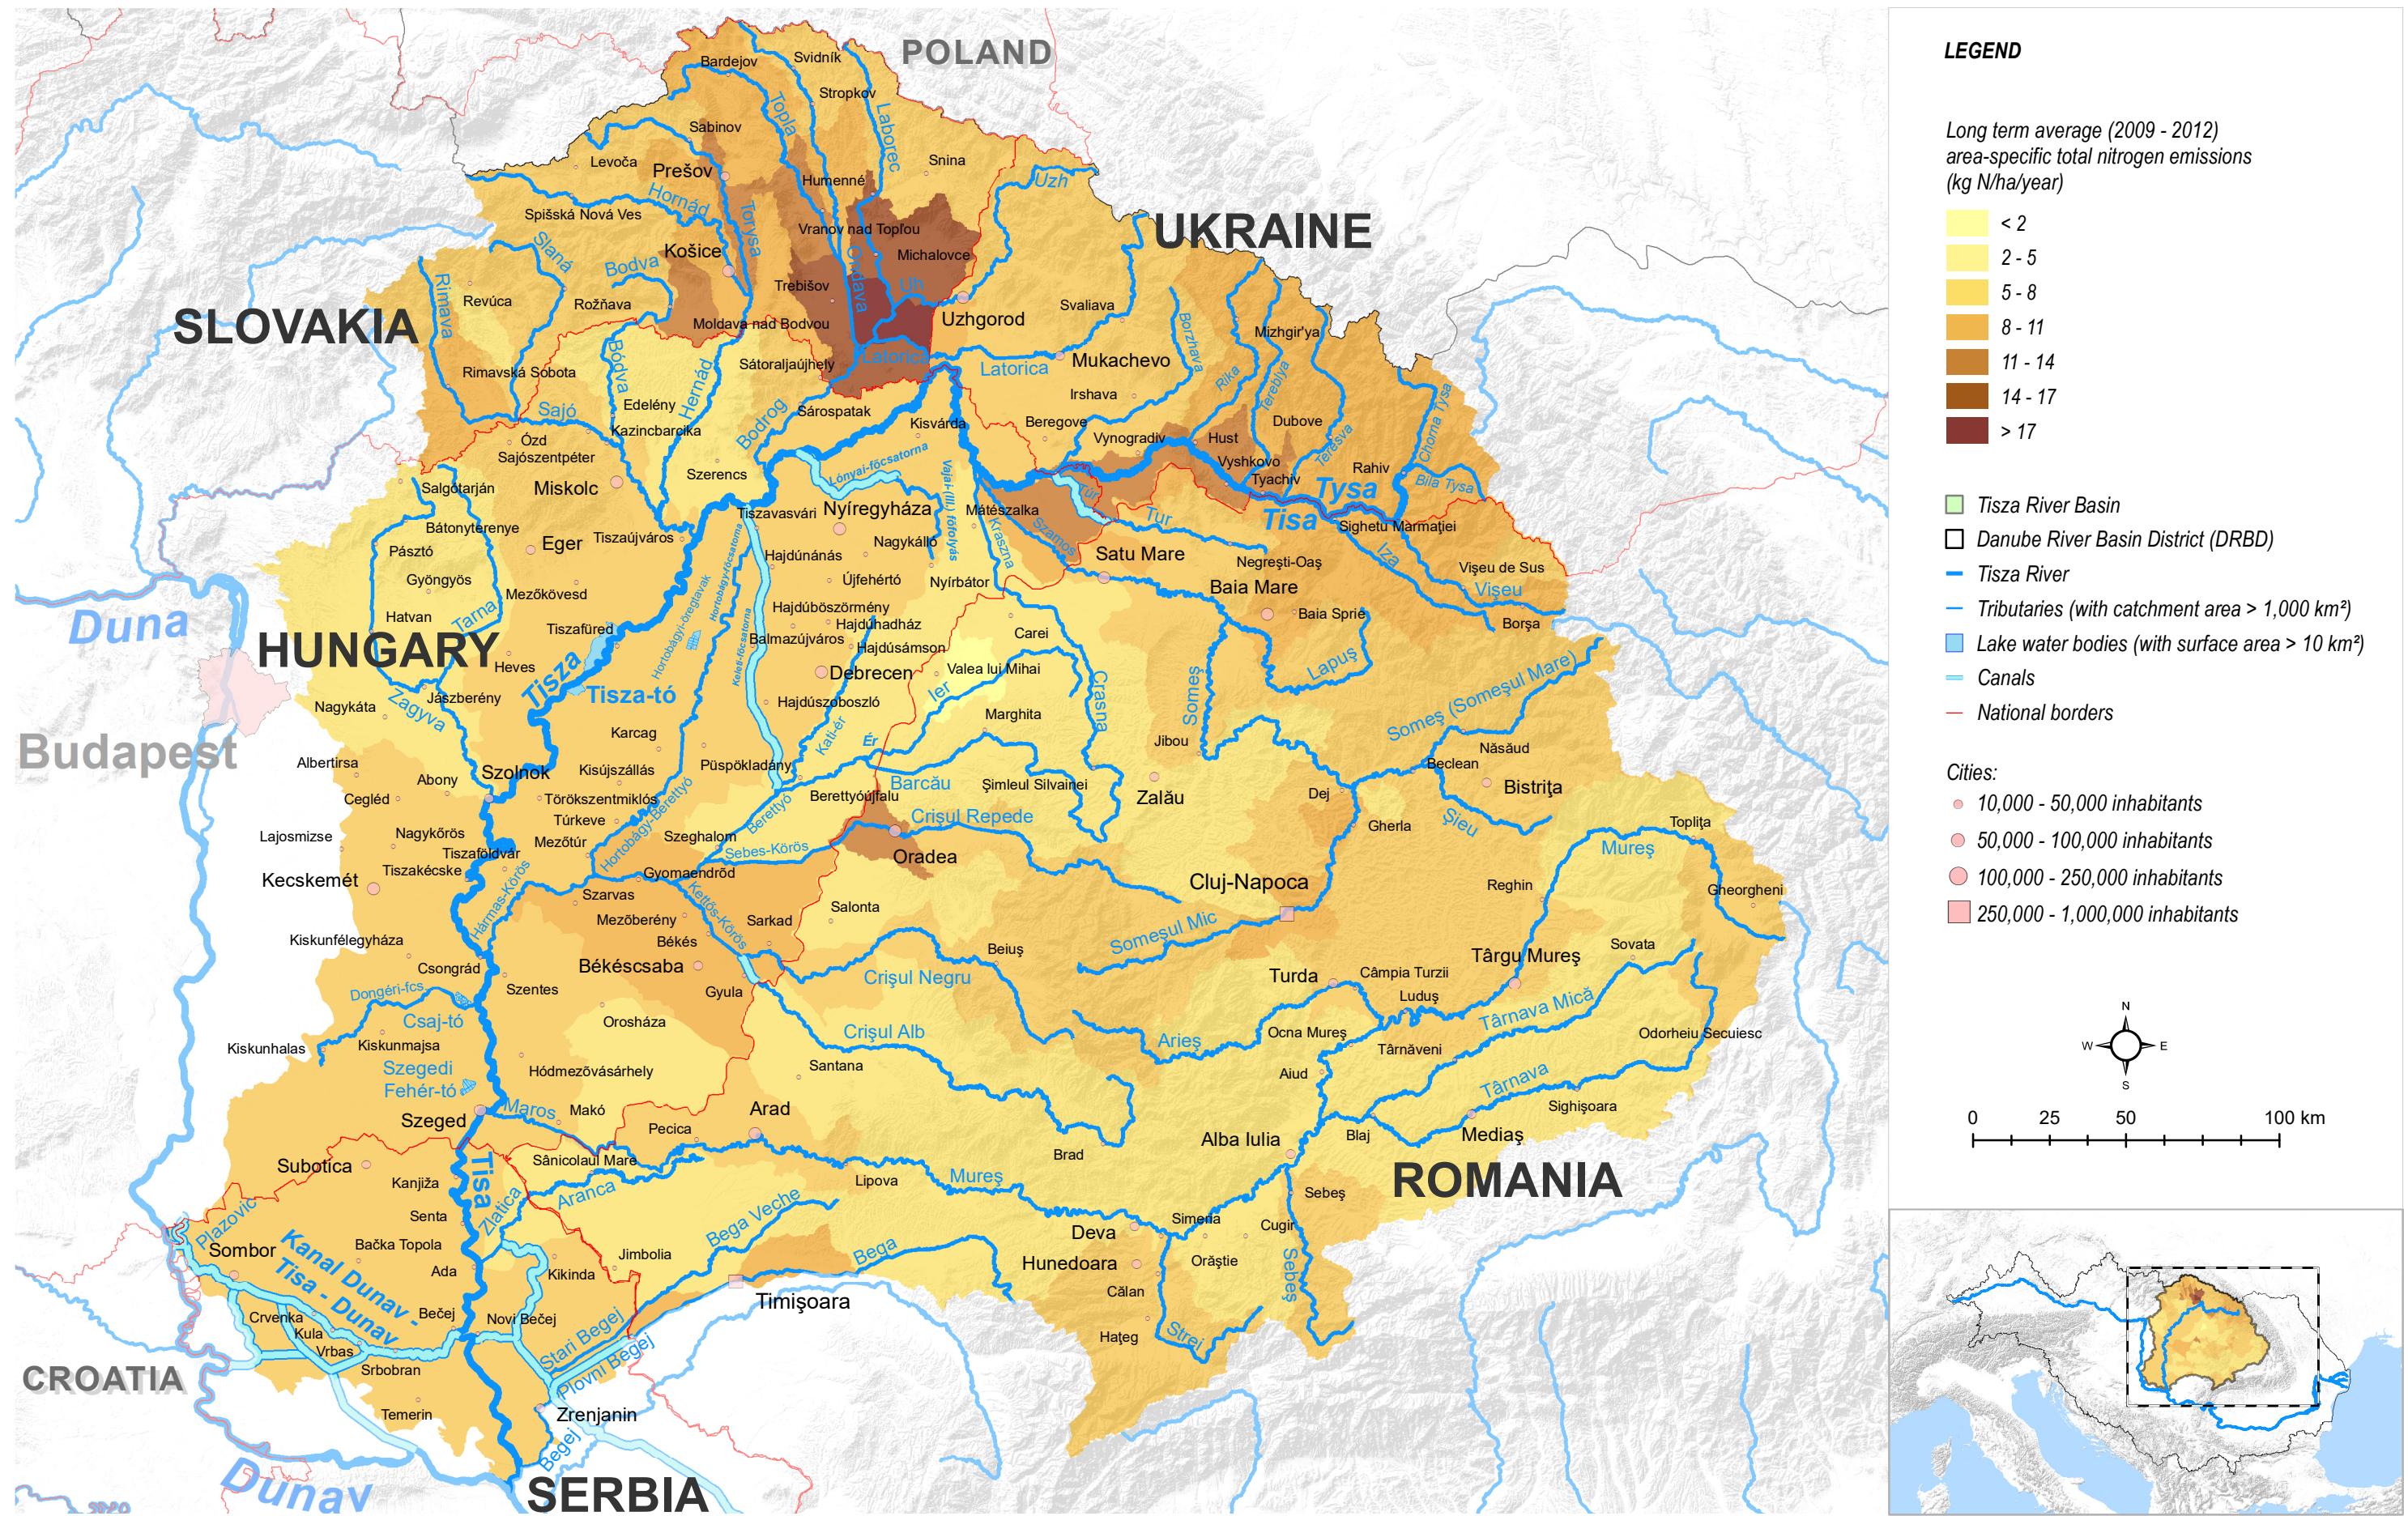

Map 36. Nutrient Pollution from Point and Diffuse Sources - Baseline Scenario 2021: Nitrogen

Updated ITRBMP 2019

This map illustrates nitrogen emissions entering the surface water bodies from catchment areas.

The emissions were calculated according to long-term average hydrological conditions and measures indicated by the countries to be implemented by 2021. Calculation was implemented using the MONERIS model (Venohr et al., 2018)

This map is based on national information provided by the Tisza countries (HU, RO, RS, SK, UA), except for the following: EuroGlobalMap v2.1 from EuroGeographics was used for national borders of HU, RO, SK and UA; Shuttle Radar Topography Mission (SRTM) from USGS Seamless Data Distribution System was used as topographic layer.
