

O 6.1 Training Programme for the use of the Strategic Framework

The Training Programme for the use of the Strategic framework aims to present the results and findings of the project to a wider targeted audience primarily from agriculture, forestry, water management to demonstrate the need and the practical solutions for cross-sectoral, harmonised measures to IAS management to ensure the uptake of the measures by relevant sectoral policy makers. The Training Programme was developed based on the insight from the Strategic Framework for IAS Management in the SRB. The trainings target national-level stakeholders/Practitioners. Although it was planned to organize three trainings in each of the four riparian Sava countries, one for each the agriculture, forestry and water management sector it was decided that a joint training would benefit all sectors. The issue of tackling IAS cannot be solved by only one sector, hence it is important to bring all relevant stakeholders together.
