

KRANJ

"New Drulovka" (c) City of Kranj

Drulovka

Located in the Southeastern part of the city, Drulovka was constructed as an above-standard, quiet neighbourhood, based on the building plan from 1983. The natural surroundings, provides the best conditions for young families. In the last decades, despite a well-planned concept, the topic of public, semi-public and private space differentiation has become a challenging issue.

Due to the failed realization of the city plan, resulting in the inadequate use of public areas, the site was selected as an AGORA pilot area. The main objective is to achieve the determination of land use through a participatory approach. Kranj wants to identify local needs, find common solutions and include them in plans and in space creation, with public interest taking precedence over that of private improving the quality of life in the neighbourhood.
